

# Blockchain Authenticity Platforms

**Blockstamped™** is a core blockchain architecture that authenticates users to content. Content can include music, photographs, podcasts, videos, voting records, and much, much more.

**Blockstamped™** is integrated with Ethereum smart contracts but can be integrated with any private blockchain technology via a singular API.

Not only does **Blockstamped™** link a person to the content that person creates it also hashes the content in order for duplicates to be discovered online. This searchable hash allows for the prevention of deep fake videos, illegal copies of media content in regions that aren't licensed.

Offers auditing of streaming services like YouTube, Spotify to count the number of plays, shares, or views using transanalytics.

**blockstamped** **io**  
a blockchain platform

content never out of context

contracts never out of context

**bassed** **io**

a blockstamped app for media licensing and remittance

choices never out of context

**politisign** **io**

a blockstamped app for individual voting history, voting privacy, and election audit

conditions never out of context

**healthsign** **io**

a blockstamped app for individual healthcare records, and healthcare privacy

**Bassed™** is a blockchain application that works on the **Blockstamped** platform that caters to media creators, producers, and distributors. This includes music, podcasts, videos, images, and documents such as scripts or treatments.

Protects (white labels) media content so when a duplicate appears, it sends out a notice offering reasonable licensing terms (instead of destroying). Handles regular payments using smart contracts. Or blacklists illegal duplicates of content that licensing can not be agreed upon.

**Politisign™** is an application within the **Blockstamped™** ecosystem that connects an authenticated user to their voting history. Also allows for election results to be connected to the bigger picture of the election to visualize how one vote affected the overall end result.

**Politisign™** is available to be used by all voting apps across all political parties including integration to Microsoft Electionguard.™

**Healthsign™** is an application within the **Blockstamped™** ecosystem that connects an authenticated user to their health records history and audits medical queries to those records.

**Healthsign™** is available to be used by all healthcare apps around the globe. It links AMA CPT Codes to the individual.

Offers audits of all queries to an individual's health history.

code never out of context

**api.blockstamped** **io**

a blockstamped API for code and app development

coordination never out of context

**supplysign** **io**

a blockstamped app for logistics and operations efficiency

The **Blockstamped™** ecosystem is available via API to be used by all developers to create their own Smart Contract applications focused on Industry needs.

**Supplysign™** is an application within the **Blockstamped™** ecosystem available to be used by all supply blockchain technologies including DLT Labs,™ TradeLens.™

“ Small towns are overlooked as being places of innovation. But not Canton. This little papertown is the little city that can and will.

We wanted to empower our citizens with a way to feel that their vote matters for the small and bigger picture things. More importantly, give transparency to the election process.

The most fundamental principle defining credible elections is that they must reflect the free expression of the will of the people. To achieve this, elections should be transparent, inclusive, and accountable.

Politisign via the Blockstamped platform gave our registered voters their American birthright:

Freedom.

”

- Mayor Zeb Smathers

“ The music industry has been in a desperate need to lock music to the musician who created it for decades. Sure, music is a soup of ideas that feed one another. But in the end, a hit song has an originator. Being one who has been the originator of multiple hit records, having a safety net to say, "This is mine" has been a godsend.

”

- Bob 'Bassy' Brockmann
